SUMMARY

B.Tech CSE (Data Science) student with strong Data Structures & Algorithms and core CS fundamentals, and hands-on experience building complete, production-style security systems end to end — from SIEM deployment, network reconnaissance, and vulnerability triage to an AI-augmented malware analysis pipeline with deterministic scoring and grounded LLM reasoning. Comfortable owning a problem from design through debugging to a working, demoable result, with practical exposure across cloud security fundamentals, detection engineering, and incident response workflows.

EDUCATION

GL Bajaj Institute of Technology and Management — B.Tech, CSE (Data Science) *Greater Noida, UP*
CGPA: 6.8 | Expected Graduation: May 2027

The Woods Heritage School *Jhansi, UP*
12th (ICSE) — 66.67% | 10th (ICSE) — 79.5%

SKILLS

Programming Languages: Python, C++
Core CS Fundamentals: Data Structures & Algorithms (DSA), OOP, DBMS, Operating Systems, Computer Networks, System Design Fundamentals
Core Cybersecurity Skills: Ethical Hacking & VAPT, Digital Forensics & Incident Response, SOC Operations, Malware Analysis & Reverse Engineering, Cloud Security, Network Security, Detection Engineering
SIEM / Detection Tools: Wazuh, Splunk, MITRE ATT&CK mapping
Malware Analysis Tools: FLARE-VM, REMnux, x64dbg, Ghidra, Cutter, dnSpy, PEStudio, CAPA, YARA, Procmon, Wireshark, VirusTotal
Network Security Tools: Wireshark, tcpdump, Snort, Nmap, Zenmap, Shodan
Operating Systems: Ubuntu, Kali Linux, Parrot OS, Arch Linux, Windows, Red Hat Linux
Offensive Security / Recon: Burp Suite, Metasploit, subfinder, httpx, nuclei, ffuf, katana
Other Tools: Git, VS Code, GitHub Copilot, Docker

PROJECTS

Wazuh SOC Home Lab *June 2025 – July 2025*

- Deployed a single-node Wazuh 4.7.3 SIEM via Docker on Linux Mint with a monitored host agent, capturing 285+ security events and enabling automatic CIS benchmark compliance scanning (SCA)
- Simulated three attack scenarios from a Kali Linux container — Nmap port scan, manual SSH brute force, and automated Hydra brute force — with all three detected and alerted within seconds
- Mapped brute-force alerts to MITRE ATT&CK techniques T1110 and T1110.001, with automatic compliance tagging across PCI DSS, HIPAA, NIST 800-53, and GDPR

Vulnerability Scanner *May 2026 – June 2026*

- Built a desktop reconnaissance and vulnerability-scanning tool (PyQt6) combining Nmap/Zenmap-based port scanning (SYN/TCP/UDP/OS detection), DNS enumeration with subdomain brute-forcing, and WHOIS/IP intelligence via Shodan
- Integrated CVE lookup against the NIST NVD database and a Metasploit-based exploit suggester mapping detected services to candidate modules
- Added web reconnaissance (security header analysis, directory brute-forcing, SSL/TLS checks), scan history storage, PDF/JSON/CSV export

Malware Triage Assistant *August 2026 – September 2026*

- Built a static malware triage tool for Windows PE files combining deterministic indicator scoring (entropy/packing, import-risk categorization, string/IOC triage, signature and VirusTotal checks) with RAG-grounded LLM reasoning (LangGraph agent over a FAISS index of MITRE ATT&CK + CAPA) and a human-in-the-loop approval gate
- Made suspicion scoring fully deterministic after discovering LLM-assigned severity was inconsistent run-to-run on identical input even at temperature=0, restricting the LLM to grounded narrative explanation with every cited ATT&CK technique cross-verified against retrieved evidence
- Extended the pipeline with opt-in VirusTotal/cloud sandbox dynamic analysis, multi-sandbox consensus filtering, batch triage with LLM-cost gating, and post-approval YARA/STIX/MISP export via a Streamlit GUI; validated in a dual-VM lab (FLARE-VM + REMnux) using x64dbg, Ghidra, Cutter, dnSpy, and PEStudio

CERTIFICATIONS

Palo Alto Networks: Cybersecurity Foundation, Network Security Fundamentals, Cloud Security Fundamentals, Security Operations Fundamentals, Security Operations Configuration (Authorized Academy Instructor)

Cisco: CCNA: Introduction to Networks, CCNA: Switching/Routing/Wireless Essentials, CCNA: Enterprise Networking, Security & Automation, Introduction to Cybersecurity, Junior Cybersecurity Analyst Career Path, Python Essentials 1 & 2 (OpenEDG)
